Abstract. The use of open science in the scientific activities of institutions allows to increase the level of information access and transparency of information about the results of scientific research and its promotion in the world. In turn, we need leverage and effective mechanisms to increase the level of transparency in the dissemination of science and the ability to obtain input from research. This article analyzes the work of representatives of national and international scientific schools on the study of open science and its impact on the scientific activity of organizations. The conceptual category of «open science» is considered. The main components of open science in the system of scientific activity of organizations are studied, which include: easy access to scientific products, transparent review of research results, open methodological complex, accessible educational process and the possibility of using software products without limited access...
